Investor Tear Sheet

Vecto in 60 seconds — for investors and intermediaries

vecto-os.com · 5 May 2026

What is Vecto

A **graph-native projectplatform** built so humans and AI agents work as co-equal participants on the same data. Browser for humans, MCP for AI. Same data, same rights, same audit trail.

Headquartered in **Belgium**, with EU sovereignty as architectural choice, foundation-led governance, and open-core DNA.

Tagline: Autonomous Intelligence. Human Control.

The Problem

AI now writes code, plans sprints, and triggers deployments. But for organizations under EU AI Act, NIS2, DORA, or eIDAS 2.0 — speed without provable governance is a regulatory liability.

The question is no longer *if* AI runs in your delivery process. It is **how you prove what AI did**.

The Solution — Three Architectural Choices

1. **The Living Graph** — typed nodes (ideas, decisions, plans, tasks, releases) connected by typed edges. Reasoning, not just artifacts. Annex IV documentation as a derivable export.
 2. **Two equally-privileged surfaces** — humans use the browser, AI agents use MCP. Same data, real-time consistent. No exports, no sync rituals, no lost context.
 3. **Autonomy spectrum** — Observe → Advise → Assist → Delegate → Automate. Per task, per user, per project. Human oversight as design property, satisfying AI Act Art. 14.
-

Market Timing

Force	Inflection year
EU AI Act high-risk obligations	August 2026
NIS2 transpositions completing	2025-2026
DORA enforced (financial sector)	January 2025
eIDAS 2.0 EUDI Wallet	2026-2027
GenAI: helper → autonomous agent	2024-2026

One-time window for the platform architected for the new normal.

Differentiation

Architectural advantages competitors cannot easily retrofit:

- Graph data model (vs table-based Jira/Linear/Notion)
 - AI as co-equal participant (vs bolt-on AI features)
 - EU-built + on-prem deployment (vs US SaaS-only)
 - AI Act-ready audit trail (vs general-purpose logs)
 - Foundation-led governance (vs exit-driven structure)
-

Business Model

Stream	Customer fit
Public SaaS — per-seat + usage	Higher KMO + lower enterprise
Private SaaS — subscription + managed	Mid + upper enterprise
On-prem — license + maintenance, self-report	Enterprise compliance, public sector
Untether release fee + 5y royalty	Mature products graduating from Vecto

Royalty stream funds the Vecto Foundation — structural reinvestment in open ecosystem.

Foundation-Led Structure

Vecto's IP and brand are held by a **Belgian Stichting van Openbaar Nut** (public-benefit foundation). The commercial entity licenses from the foundation.

- Mission cannot be diluted by future ownership changes
- Hostile takeover structurally impossible
- License-fee from commercial → foundation funds the ecosystem
- Returns come from operational dividends + structural durability — not flip-and-exit

Suitable for **mission-aligned and long-term capital**.

Team

Founding team in formation, with backgrounds in:

- Cryptography & enterprise security (ex-EU Council, ex-major financial network, CISSP, EU/NATO clearances)
- AI orchestration & multi-tenant platform engineering
- Enterprise B2B sales, BE/EU consulting channels
- AI training & operational adoption
- UX, community, education

Names + detailed bios under NDA.

Status & Ask

- Production deployment operational since *(date — update)*
- Active design-partner conversations: *(N — update)*
- Architecture: hardened; compliance program: maturing; sales motion: starting

Exploring conversations with **mission-aligned investors** who value structural durability over exit optimization, are comfortable with EU regulatory positioning as moat, and can introduce enterprise + public-sector design partners.

Indicative seed/pre-seed range: **€[X]M** *(customize per conversation)*.
